

Liquid Chlorine @ 12 to 13% Sodium Hypochlorite

Super chlorinate (shock) the pool ideally with liquid chlorine to shock level to 20 ppm of Free Chlorine using Liquid Chlorine (1.5L per 10,000L) or run the filtration system allow chlorine to spread more readily through the pool and the filtration media

Understand that Liquid Chlorine has a pH value of 13.0. So it is important that the pH level is monitored and adjusted as required to achieve a high chlorine efficiency required to deal with an algal outbreak.
